Supervisor: Nouman Ali

Academic Year: 2026-2027

Version 2.0 | 23 September 2026

Document Control

Project: DailyKhata

Document: Canonical Terminology

Version: 2.0

Status: Authoritative reconstruction baseline under the user-authorised scope

Authors: DailyKhata Project Team

Supervisor: Nouman Ali

Academic year: 2026-2027

Revision date: 23 September 2026

Submission date: Not recorded for this replacement

Supervisor endorsement: To be recorded after review

Revision History

Historical source versions remain unchanged in their original locations. This replacement consolidates scope, terminology and evidence provenance under the recorded decisions. Version 2.0, 23 September 2026, prepared for the DailyKhata Project Team.

List of Tables

Table 1: Canonical concept definitions.....	4
Table 2: Canonical personas	5

1 Purpose and use

This register fixes the language and identities shared by D1 v2.0 and D2 v2.0. A synonym can be used in an attributed quotation, but it must not silently rename a system concept. Stable scope IDs and persona IDs support later requirements traceability.

Table 1: Canonical concept definitions

Preferred term	Meaning and boundary
DailyKhata	Personal expense management application for the approved Pakistani personal and household context.
Receipt digitisation	Conversion of receipt information into reviewable structured records; not a promise of perfect OCR.
OCR	Optical character recognition of text from a receipt image; structured extraction interprets recognised text into fields.
Expense transaction	A saved expense record owned by one account; distinct from a payment execution or bank transaction import.
Line item	An individual receipt entry with original text and available quantity and price values.
Automatic categorisation	System proposal of transaction and line-item expense categories, subject to confirmation or correction.
Expense category	Stable classification presented using a familiar label, such as Ration or Household Supplies.
Chart of Accounts	Internal structured accounting account register, distinct from the list of user-visible labels.
Accounting mapping	Link from an expense category to an internal accounting account; changing a label must not change meaning silently.
Item-level price history	Recorded prices over time for sufficiently identifiable products, with dates and quantity context.
Semantic product classification	Assignment of a canonical product type while preserving individual product, brand and original receipt text.
Original receipt text	Unmodified captured receipt text retained separately from corrected or inferred fields.
Individual product	A distinct purchasable product, including its brand and relevant pack-size or variant identity.
Brand	Product brand, if identifiable; not interchangeable with product type or expense category.
Canonical product type	Shared semantic grouping, such as Laundry Detergent, spanning distinct brands and products.

Preferred term	Meaning and boundary
AI Financial Assistant	Core conversational capability grounded in authorised DailyKhata records; no payment or bank-control powers.
Localisation	English and Urdu adaptation, including potential right-to-left presentation and Urdu interaction; Should Have.
Custom category label	Renaming the user-facing label of an existing category; Should Have.
User-created category	Creating a new category identity and maintaining its mapping; Could Have.
Household expense management	One account holder records household expenses; collaboration and shared accounts are future scope.
Recurring-spending analysis	Assistant discussion of repeated past spending; core. Automatic recurring expense creation is future scope.
Unusually high spending	Data-grounded comparison or explanation by the assistant; not a committed predictive anomaly-detection service.
Month-to-month comparison views	Dedicated comparison presentation; Should Have. Conversational period comparisons remain Must Have.
Receipt image archive	Retention and retrieval of receipt images beyond processing; Should Have.
Design persona	A representative design profile. It is not proof that a corresponding participant fact has been independently verified.
Source-reported evidence	An assertion present in an original project source, preserved with its limitations.
Project-team analysis	Interpretation, synthesis or design reasoning; not a new observation or interview finding.

2 Canonical identities

These are canonical design personas, not a new participant sample. Names and source-supported attributes are preserved from D1 and D2. Usman Raza uses the D1 design age of 41; D2 reports an interview age of 46 without corroborating records. DEC-01 records that unresolved source fact without leaving two competing persona definitions.

Table 2: Canonical personas

ID and name	Age and role	Classification
P-01 Ayesha Tariq	34 Homemaker and household budget manager	Primary
P-02 Bilal Ahmed	27 Salaried professional	Primary
P-03 Hamza Sheikh	21 University student	Primary

ID and name	Age and role	Classification
P-04 Zubair Hassan	Not recorded Family member and spouse of a primary user	Secondary beneficiary
P-05 Usman Raza	41 Small shopkeeper	Secondary direct user

Primary persona roles are P-01, P-02 and P-03. P-04 is a secondary beneficiary; P-05 is a secondary direct user. Advisers are secondary stakeholders. The development team and supervisor are internal project stakeholders. OCR, AI and hosting providers are external technical stakeholders if selected. Privacy and regulatory context is a constraint domain, not a named interviewed person or organisation. Bank and payment partners are future stakeholders only.

3 Priority and identifier rules

SC-01 to SC-30 retain their existing meanings with clarified wording. SS-03 to SS-06 and SS-08 to SS-11 retain distinct optional capabilities. SS-01, SS-02 and SS-07 are aliases of SC-10, SC-29 and SC-28 respectively. No alias changes a priority. Consult Project Scope for the complete register.

4 Source of terminology

Project owner scope instructions, existing governance v1.0 and original D1 and D2 provide the vocabulary. DEC-01 to DEC-20 record corrections and clarifications. New terminology requires a definition, source or design rationale and an impact check before use in later deliverables.
