Version 2.0 | 23 September 2026

Document Control

Project: DailyKhata

Document: Consistency Audit

Version: 2.0

Status: Authoritative reconstruction baseline under the user-authorised scope

Authors: DailyKhata Project Team

Supervisor: Nouman Ali

Academic year: 2026-2027

Revision date: 23 September 2026

Submission date: Not recorded for this replacement

Supervisor endorsement: To be recorded after review

Revision History

Historical source versions remain unchanged in their original locations. This replacement consolidates scope, terminology and evidence provenance under the recorded decisions. Version 2.0, 23 September 2026, prepared for the DailyKhata Project Team.

Table of Contents

1 Audit conclusion and scope	4
2 Workspace inspection and source preservation	4
3 Original inconsistencies and selected resolutions	5
4 Cross document content checks	8
5 Word document quality control	9
6 Items requiring human confirmation	10

Table 2: Reconciliation register	5
Table 3: Content alignment results	8
Table 4: Formatting and release checks.....	9
Table 5: Authoritative replacement documents	10

1 Audit conclusion and scope

D1 v2.0 and D2 v2.0 are aligned on the reconstructed project baseline. The cross-document audit found no remaining contradiction in their canonical project definition, problem statement, user groups, personas, capability priorities or architectural boundaries. They share 38 distinct scope entries and five persona records. Source uncertainty is retained explicitly and is not presented as verified fact. This conclusion concerns document consistency, not implementation quality, fieldwork authenticity or supervisor endorsement.

The audit covers the seven replacement Word documents prepared on 23 September 2026. Original D1 and D2 files and both earlier governance documents remain unchanged. The D3 instructions were read for compatibility only; no Deliverable 3 was created. D1 was completed and audited before D2 authoring began.

2 Workspace inspection and source preservation

The recursive pre-authoring inventory contained ten source files. D1 was available as Word and PDF; D2 was available only as PDF. The existing folder structure was retained. References was empty. No spreadsheets, separate research datasets, raw interviews, observation logs, standalone diagram files, application source code or additional project notes were found.

Table 1: Complete original source inventory

Location	Material and use
00_Project_Governance	DailyKhata_Scope_Baseline_v1.0.docx: existing scope authority, read completely
00_Project_Governance	DailyKhata_Documentation_Standard_v1.0.docx: existing formatting authority, read completely
01_Deliverable_1	dailykhata-d1.docx: complete source text and tables; historical original preserved
01_Deliverable_1	dailykhata-d1.pdf: corresponding six-page submission representation
01_Deliverable_1/task	task.txt: D1 objectives and marking criteria
02_Deliverable_2	dailykhata-d2.pdf: complete 12-page source, including quotations, personas and elicitation
02_Deliverable_2/task	task.txt: official D2 title, required sections and evidence expectations
02_Deliverable_2/task	Design Thinking.pdf: six instructional slides on observation, interviews and interpretation
02_Deliverable_2/task	Important Links.txt: 19 teaching-video links; identified and retained, not treated as watched or verified research

Location	Material and use
03_Deliverable_3/task	Deliverable 3.pdf: all five pages read for later business, functional and non-functional requirements compatibility

The original D2 stakeholder funnel is represented as an industry-to-stakeholder table in the replacement. It preserves the analytical sequence without retaining the conflicting stakeholder treatment. The teaching slides are instructional material rather than DailyKhata research figures. No new figures were needed, so figure lists are not applicable.

SHA-256 hashes were recorded before authoring and compared after reconstruction. All ten original files matched, including the three historical D1/D2 files. Supporting inventory and check records are retained under 00_Project_Governance/reconstruction_work for reproducibility; they are not additional deliverables.

3 Original inconsistencies and selected resolutions

DEC-01 to DEC-20 in the Decision Log provide the previous state, selected decision, reason and affected documents. The following register summarises the complete reconciliation. Applied means propagated to the authoritative replacements, not independently confirmed by an interview participant.

Table 2: Reconciliation register

Decision and original issue	Resolution and justification	Affected documents
DEC-01 D1 persona table gives Usman age 41; D2 pp. 3, 7, 8 and 10 give 46.	Retain 41 as the canonical design persona age; preserve the source discrepancy in the evidence register. Earlier D1 fact takes precedence without corroborating participant records. Actual participant age needs team confirmation.	D1, D2, terminology, audit
DEC-02 D1 summary narrows primary users to two groups; its main text includes salaried professionals. Hamza appears only in D2.	Three primary groups: homemakers and household budget managers, university students, salaried professionals. Carry Hamza Sheikh, 21, into D1. Approved scope and D1 main text establish all three groups; D2 provides the student persona.	D1, D2, scope, terminology
DEC-03 D1 calls Zubair a spouse but uses an inconsistent gendered description; both sources imply a shared budget.	Use gender-neutral family-member wording; review is with the account holder or through shared output. Age remains not recorded. No evidence supports a new identity, age or multi-user household architecture.	D1, D2, scope, terminology
DEC-04 D1 and D2 refer broadly to SMEs, daily transactions and business expenses.	Usman is a secondary direct user for petty cash and supplier expenses only. Approved scope excludes complete SME accounting, sales, inventory and POS.	D1, D2, scope

Decision and original issue	Resolution and justification	Affected documents
DEC-05 D2 p. 3 attributes a statement about a customer paying to Usman.	Preserve the statement as source-reported evidence, but do not derive sales or payment requirements. The statement concerns cash capture friction; its income context falls outside expense scope.	D2, decision log, audit
DEC-06 D1 promises categories without intervention; D2 requires confirmation.	Automatic categorisation proposes values; users confirm or correct before saving. Approved scope and D2 elicitation explicitly require user control.	D1, D2, scope
DEC-07 Voice/photo-first language and text-or-voice requirements blur mandatory and optional capture.	Manual quick entry and text-based cash entry are Must Have; voice-based cash entry is Should Have. Preserves capture for no-receipt purchases without making speech recognition a baseline dependency.	D1, D2, scope
DEC-08 D1 says several million users, typical Rs. 40,000 spending, universal pain and widespread abandonment within days or weeks.	Remove numerical market estimates and population-wide behavioural claims. Retain individual reported experiences with attribution. No sampling basis, citation or market-size calculation exists in the workspace.	D1, D2, audit
DEC-09 D1 and D2 make sweeping claims about Mint, Wallet, Cashew and bank apps.	Retain D2 comparison as a historical team-reported test only; do not state current competitor capabilities or superiority. Versions, test dates, bank-app identity and screenshots are absent.	D1, D2, audit
DEC-10 D1 says almost instant answers; D2 promises all capture under 10 seconds and OCR in a few seconds.	Treat speed as a usability expectation; measure capture, correction and service latency separately during later validation. No benchmark supports a universal threshold; receipt complexity, network and corrections vary.	D1, D2, scope
DEC-11 D2 expects operation with inconsistent connectivity; offline functionality is not clearly bounded.	Must Have workflows require honest loading, failure and retry behaviour; offline draft entry remains Could Have. Ordinary-device support does not imply offline OCR or an offline language model.	D1, D2, scope
DEC-12 Original deliverables omit or underdescribe authentication, ledger maintenance, full Chart of Accounts, semantic products and assistant breadth.	Carry the approved scope register in both deliverables and explain these capabilities as scope decisions. The user-authorised scope and existing scope baseline supply their authority, not invented interviews.	All replacement documents

Decision and original issue	Resolution and justification	Affected documents
DEC-13 Optional comparisons overlap with core assistant comparisons; future anomaly detection overlaps with unusual-spending discussion.	Assistant answers about periods, patterns and unusually high recorded spending are core. Dedicated comparison views are Should Have; predictive or automated anomaly-detection systems remain future. Separates data-grounded conversational analysis from additional screens and predictive infrastructure.	D1, D2, scope, terminology
DEC-14 Local labels, custom labels and user-created categories are conflated; SS duplicates SC entries.	Fixed local labels are Must Have; custom labels Should Have; new categories Could Have. SS-01 aliases SC-10, SS-02 aliases SC-29, SS-07 aliases SC-28. Retains existing identifiers and avoids double-counting or priority drift.	D1, D2, scope, terminology
DEC-15 D2 cover repeats the D1 title; original documents have inconsistent formatting and manual headings.	Use the D2 assignment title, one Word standard, automatic headings, contents and page fields. D1 title retains its original official wording. Aligns covers with assignment purpose and supports future maintenance.	All replacement documents
DEC-16 Existing governance is labelled Approved Baseline but no approval record is present. Submission dates are not established.	Preserve v1.0 files. Replacement baseline follows the user-authorised scope; supervisor endorsement is not claimed. Date replacements 23 September 2026. An assignment deadline and file modification date do not establish actual submission or approval.	All replacement documents
DEC-17 Standards-aligned accounting could imply certification or a complete business accounting suite.	Use stable accounts, account types, category mappings and accounting-compatible expense records. Balanced journals are mandatory wherever double-entry is used. Supports structured financial records without claiming IFRS, banking or regulatory certification.	D1, D2, scope
DEC-18 Interview and observation narratives lack underlying records; persona traits can be mistaken for verified participant facts.	Label evidence as source-reported; label personas as design profiles. Add no interviews, quotations, survey results or statistics. Preserves provenance and avoids converting plausible analysis into fieldwork.	D1, D2, audit
DEC-19 Existing standard prefers Roman front matter but permits continuous Arabic pagination.	Use continuous Arabic Page X of Y fields, counting the cover but hiding its number. Permitted convention reduces numbering complexity and is identical across the new documents.	Documentation standard and all replacements
DEC-20 Receipt retention is described as permanent; item normalisation could erase brand identity.	Structured records are core; image archive is Should Have. Preserve original receipt text separately from corrected and inferred product fields. Storage lifetime is not guaranteed; semantic grouping must not merge distinct products or pack sizes.	D1, D2, scope, terminology

Two related source issues are also recorded in the Decision Log. D2 gives ambiguous timing for follow-up interview questions, so the replacement preserves the questions without asserting a separate visit schedule. The D3 rubric heading says 10 marks while its total and components indicate 20.0; the replacement adopts only its requirements workflow, leaving grading clarification to the supervisor.

4 Cross document content checks

Table 3: Content alignment results

Check	Result and evidence
Project and problem definition	Pass. Identical canonical definition and problem statement occur in D1 and D2. D2 problem statement occupies three rendered lines, within the four-line limit.
Users and market	Pass. Three primary user groups; small shopkeepers secondary. Indicative 18 to 50 range is not a verified statistic or eligibility ceiling.
Persona names ages and roles	Pass. Ayesha 34, Bilal 27, Hamza 21, Zubair age not recorded, Usman design age 41. The source age 46 is explicitly a disputed source record.
Stakeholder classifications	Pass. Family review does not create shared accounts. Shopkeepers can be secondary direct users. D2 adds internal and conditional provider analysis without redefining D1 users.
Feature coverage and priorities	Pass. All 38 scope entries match exactly in D1, D2 and Project Scope. Three legacy SS aliases are retained without duplicate requirements.
Accounting architecture	Pass. Shared mapping table and wording distinguish labels, categories and accounts. Double-entry journals must balance wherever used; no certification claim.
Product semantics and history	Pass. Shared product examples retain original text, brand, product identity, type, category and account. Comparable quantities are required for like-for-like price claims.
Assistant capability	Pass. Core financial querying and data-grounded analysis remain mandatory; no money movement. Conversational comparisons are distinct from optional comparison views.
Localisation and optional features	Pass. English and Urdu localisation and voice are Should Have. Urdu implementation is not guaranteed. Offline draft entry remains Could Have.
Exclusions and future scope	Pass. Identical exclusion and future-scope passages in D1 and D2. No bank, wallet, ERP, POS or shared-household implementation obligation is introduced.
Evidence and statistics	Pass with provenance limitation. Existing reported findings and three quotations are retained in D2. Unsupported population estimates are removed as facts. No new research is fabricated.
Terminology and language	Pass. Canonical terms, British English review and en-GB Word spelling check applied. Names and product terms explain remaining dictionary flags.

Check	Result and evidence
Future D3 compatibility	Pass. D2 supplies evidence and scope traceability plus requirement candidates. Formal BR/FR/NFR decomposition and measurable validation remain later work.

Automated checks also compared four shared canonical tables and twelve shared architectural or scope paragraphs for exact equality. Narrative review checked exceptions and qualifications, including optional exports, dedicated household summaries, recurring-spending analysis, future recurring expense creation and future anomaly detection. Matching text alone was not treated as proof of complete consistency.

5 Word document quality control

The documents were generated with Word styles and automatic fields, then opened in Microsoft Word to update contents, caption lists and pagination. The supplied renderer could not run because its LibreOffice conversion engine was unavailable. Microsoft Word PDF export and page-image inspection supplied the rendering check. Rendered files are internal QA artefacts, not requested outputs.

Table 4: Formatting and release checks

Check group	Result
Page layout	Pass. A4; top and bottom 1 inch; left 1.25 inches; right 1 inch.
Typography and paragraph spacing	Pass. Visible text uses Times New Roman. Body 12 pt, justified, 1.15 spacing and 6 pt after. Tables, captions and front matter use documented exceptions.
Headings and numbering	Pass. Word Heading styles with automatic multilevel numbering; 16/14/12/12 pt hierarchy and bold italic Heading 4. No manually typed heading numbers.
TOC and table lists	Pass. Word-generated fields refreshed; displayed entries checked against rendered pages. No manual page-number lists.
Header footer and pagination	Pass. Required header and footer; Page X of Y matches page count; no number displayed on cover.
Tables and captions	Pass. Numbered captions, grey borders, bold repeated headers, controlled widths and expanding rows. Header-only page fragments found in the first draft were corrected.
Page breaks and flow	Pass. Reviewed all final pages for overflow, orphan headings, clipped rows, accidental blank pages and misplaced captions. Front-matter whitespace and final-page remainder are intentional.
Figures	Not applicable. The stakeholder sequence is a table; no generated figures or uncited diagrams.

Check group	Result
Spelling and British English	Pass. Word spelling review performed with British English; flagged names and technical terms reviewed. No unresolved ordinary-word spelling error identified.
Prohibited punctuation	Pass. Full generated DOCX XML packages searched for Unicode U+2014; zero occurrences.
Scope and traceability	Pass. Shared register, persona table, definitions and exclusions checked; DR candidates link to evidence and SC/SS identifiers.
Historical preservation	Pass. All ten source-file hashes unchanged; no output written to the Deliverable 3 folder.

6 Items requiring human confirmation

The project team should confirm Usman's actual participant age from primary records; supply interview dates, notes or recordings and consent context; and identify competitor versions, test dates and the unnamed bank application. Until then, D2 describes these as source-reported evidence. The canonical design persona age remains 41, so neither deliverable depends on resolving the conflicting source age to define its user model.

The team and supervisor should record actual submission dates, review the reconstructed baseline and document endorsement. The assignment deadline of 25 August 2026 is not treated as a submission date. Later empirical validation must establish receipt-test conditions, target devices, network assumptions and measurable quality targets. These are validation needs rather than unresolved contradictions in the replacement baseline.

7 Release record

Table 5: Authoritative replacement documents

Document	Purpose
DailyKhata_Project_Scope.docx	Scope authority and complete capability register
DailyKhata_Documentation_Standard.docx	Shared Word, language, evidence and change-control rules
DailyKhata_Canonical_Terminology.docx	Canonical concepts and persona identities
DailyKhata_Decision_Log.docx	Twenty controlled resolutions and human confirmation register
DailyKhata_Deliverable_1_v2.0.docx	Market, users, problems, needs, expectations and scope foundation
DailyKhata_Deliverable_2_v2.0.docx	Problem, stakeholders, preserved evidence and elicitation traceability

Document	Purpose
DailyKhata_Consistency_Audit.docx	Inspection record, reconciliation, alignment checks and release limitations

The replacement baseline is internally aligned and suitable as the starting point for later requirements work. It does not certify the truth of uncorroborated source research. Any later confirmed correction must be recorded and propagated through the Decision Log and this audit process.
