Final Year Project

DAILYKHATA

Project Governance Documentation Standard

Team members

Saad Mughal (F2023-009)

Khadijah Zahoor (F2023-956)

Zainab Ali Baig (F2023-528)

Aleeza Qaiser (F2023-611)

Supervisor: Nouman Ali

Academic Year: 2026-2027

Version 2.0 | 23 September 2026

Document Control

Project: DailyKhata

Document: Documentation Standard

Version: 2.0

Status: Authoritative reconstruction baseline under the user-authorised scope

Authors: DailyKhata Project Team

Supervisor: Nouman Ali

Academic year: 2026-2027

Revision date: 23 September 2026

Submission date: Not recorded for this replacement

Supervisor endorsement: To be recorded after review

Revision History

Historical source versions remain unchanged in their original locations. This replacement consolidates scope, terminology and evidence provenance under the recorded decisions. Version 2.0, 23 September 2026, prepared for the DailyKhata Project Team.

List of Tables

Table 1: Mandatory Word configuration	4
---	---

1 Purpose and authority

This standard governs all new DailyKhata Word documents. It replaces the working authority of Documentation Standard v1.0 while preserving that file as history. The project owner's instructions take precedence over older formatting. Consistent facts, traceable evidence and readable pages are required in addition to consistent typography.

2 Page and text specification

Table 1: Mandatory Word configuration

Element	Setting
Page	A4 portrait; top and bottom 1 inch; left 1.25 inches; right 1 inch
Font and colour	Times New Roman; black text; restrained grey for tables or secondary elements
Body	12 pt; justified; 1.15 line spacing; 0 pt before and 6 pt after
Heading 1	16 pt bold; Word Heading 1
Heading 2	14 pt bold; Word Heading 2
Heading 3	12 pt bold; Word Heading 3
Heading 4	12 pt bold italic; Word Heading 4
Heading numbering	Automatic multilevel decimal numbering linked to Heading 1 to Heading 4; no typed heading numbers
Tables	10 pt or 11 pt; repeating bold header; deliberate widths; rows expand; light grey borders
Captions	10 pt; automatic SEQ Table or SEQ Figure field with descriptive text
Header and footer	9 pt or 10 pt; Times New Roman; black

3 Document structure

Use a cover page, Document Control, Revision History, automatic Table of Contents, List of Figures when figures exist, List of Tables when tables exist, main content, conclusion where useful, references and appendices where applicable. Front-matter labels are unnumbered. Main headings use linked Word styles. Do not create an empty list of figures when no figures are used.

The cover states Beaconhouse National University, BS Computer Science, Final Year Project, DAILYKHATA, deliverable number and official title, all four team members and IDs, supervisor Nouman Ali, academic year 2026-2027 and the known submission date. A revision date is not a submission date. The canonical team is: Saad Mughal (F2023-009); Khadijah Zahoor (F2023-956); Zainab Ali Baig (F2023-528); Aleeza Qaiser (F2023-611).

Document Control records project, title, version, status, authors, supervisor, academic year, revision date and submission status. Revision History identifies version, date, substantive change and responsible team. Never imply supervisor approval from a filename, document status label or file timestamp.

4 Navigation captions and pagination

Use the header DailyKhata | Final Year Project. Use the footer Beaconhouse National University | BS Computer Science and automatic Page X of Y fields. Continuous Arabic pagination counts the cover, but the cover displays no number. This convention is used across all replacement documents. Keep heading paragraphs with following content and retain widow and orphan control.

Create the Table of Contents from Heading 1 to Heading 3 using Word fields. Use automatic caption sequences and a generated List of Tables or List of Figures. Refresh fields and pagination in Word before final export. Do not manually type contents page numbers. Every figure needs a caption and reference in surrounding text. Major tables need a caption, readable header, consistent widths and repeating header rows when continued.

5 Language and terminology

Use British English and en-GB proofing. Preferred forms include categorisation, digitisation, organisation, behaviour, authorised, localisation and adviser. Preserve official titles and source names where appropriate. Use DailyKhata, Chart of Accounts, AI Financial Assistant and the terms in Canonical Terminology consistently.

The Unicode character U+2014 is prohibited in all generated text, including metadata, headings, table cells, captions, headers, footers and diagrams. Search the full DOCX package before release and replace any occurrence with suitable punctuation. Use commas, colons, semicolons, parentheses or ordinary hyphens.

6 Evidence and requirements

Distinguish reported evidence, attributed stakeholder statements, project-team analysis, derived requirements and proposed design decisions. Quotations must retain their source and verification status. Do not present invented interviews, participants or results as real research. Unsupported market statistics and current competitor claims must be removed or supported by traceable sources.

D1 establishes users, problems and scope. D2 explains elicitation and derived requirement candidates. Later D3 may formalise business, functional and non-functional requirements with validation criteria. Preserve SC and SS scope identifiers. Proposed formal identifier patterns remain BR-####, FR-[SUBSYSTEM]-#### and NFR-[QUALITY]-####. Do not reuse a retired identifier for a different meaning.

Use Must Have, Should Have, Could Have, Future Scope and Out of Scope exactly as defined in Project Scope. A feature priority is independent of implementation status. Use

shall for mandatory behaviour only within the stated priority and document stage. Record any changed fact, scope or priority in the Decision Log and propagate it consistently.

7 Quality control and release

Check the page dimensions and margins, fonts, colours, heading styles and automatic numbering, TOC entries, page fields, headers and footers. Check table widths and continued headers, page breaks, orphan headings, blank pages, figure references and caption sequences. Review spelling flags with British English enabled, then inspect wording and canonical terminology manually.

Render every final page and visually inspect it for overflow, clipped text, broken tables, excessive gaps and missing glyphs. Repeat rendering after layout changes. Run a cross-document check of project definition, personas, stakeholder roles, feature priorities, evidence and exclusions. Verify source file hashes remain unchanged. Record results in the Consistency Audit, including any validation limitations.
